Foreword by Dave Thomas	v
Foreword by Larry L. Constantine	vii
Preface	x
Part I Introduction	1
1 System development as an industrial process	1
1.1 Introduction	1
1.2 A useful analogy	2
1.3 System development characteristics	8
1.4 Summary	19
2 The system life cycle	21
2.1 Introduction	21
2.2 System development as a process of change	21
2.3 System development and reuse	26
2.4 System development and methodology	29
2.5 Objectory	38
2.6 Summary	40
3 What is object-orientation?	42
3.1 Introduction	42
3.2 Object	44
3.3 Class and instance	49
3.4 Polymorphism	55
3.5 Inheritance	56
3.6 Summary	68

4	Object-oriented system development	69
4.1	Introduction	69
4.2	Function/data methods	73
4.3	Object-oriented analysis	76
4.4	Object-oriented construction	79
4.5	Object-oriented testing	80
4.6	Summary	83
5	Object-oriented programming	84
5.1	Introduction	84
5.2	Objects	86
5.3	Classes and instances	87
5.4	Inheritance	93
5.5	Polymorphism	99
5.6	An example	102
5.7	Summary	105
Part II	Concepts	107
6	Architecture	109
6.1	Introduction	109
6.2	System development is model building	113
6.3	Model architecture	125
6.4	Requirements model	126
6.5	Analysis model	130
6.6	The design model	143
6.7	The implementation model	149
6.8	Test model	150
6.9	Summary	151
7	Analysis	153
7.1	Introduction	153
7.2	The requirements model	156
7.3	The analysis model	174
7.4	Summary	199
8	Construction	201
8.1	Introduction	201
8.2	The design model	204
8.3	Block design	229
8.4	Working with construction	251
8.5	Summary	256

9	Real-time specialization	258
9.1	Introduction	258
9.2	Classification of real-time systems	259
9.3	Fundamental issues	260
9.4	Analysis	261
9.5	Construction	263
9.6	Testing and verification	272
9.7	Summary	273
10	Database specialization	274
10.1	Introduction	274
10.2	Relational DBMS	276
10.3	Object DBMS	285
10.4	Discussion	287
10.5	Summary	288
11	Components	289
11.1	Introduction	289
11.2	What is a component?	294
11.3	Use of components	297
11.4	Component management	301
11.5	Summary	311
12	Testing	313
12.1	Introduction	313
12.2	On testing	315
12.3	Unit testing	323
12.4	Integration testing	330
12.5	System testing	333
12.6	The testing process	333
12.7	Summary	338
Part III	Applications	341
13	Case study: warehouse management system	343
13.1	Introduction to the examples	343
13.2	ACME Warehouse Management Inc.	343
13.3	The requirements model	345
13.4	The analysis model	356
13.5	Construction	376

14	Case study: telecom	393
14.1	Introduction	393
14.2	Telecommunication switching systems	393
14.3	The requirements model	397
14.4	The analysis model	407
14.5	The design model	416
14.6	The implementation model	428
15	Managing object-oriented software engineering	436
15.1	Introduction	436
15.2	Project selection and preparation	436
15.3	Product development organization	445
15.4	Project organization and management	450
15.5	Project staffing	459
15.6	Software quality assurance	463
15.7	Software metrics	468
15.8	Summary	472
16	Other object-oriented methods	474
16.1	Introduction	474
16.2	A summary of object-oriented methods	476
16.3	Object-Oriented Analysis (OOA/Coad-Yourdon)	479
16.4	Object-Oriented Design (OOD/Booch)	484
16.5	Hierarchical Object-Oriented Design (HOOD)	487
16.6	Object Modeling Technique (OMT)	493
16.7	Responsibility-Driven Design	496
16.8	Summary	500
Appendix A	On the development of Objectory	503
A.1	Introduction	503
A.2	Objectory as an activity	505
A.3	From idea to reality	515
	References	518
	Index	525
